

2008

Silvicultural Activities Report

including Annual Report on Clearcutting and Precommercial Activities

Compiled from the 2008 Landowner Reports and other survey instruments.
Data collected under the provisions of Title 12 MRSA §8885 and §8878-A

Report Highlights

Harvesting and Land Use Changes

- 462,892 acres were harvested in 2008, an 8% decrease from 505,878 acres in 2007.
- 447,977 acres were "partially harvested" (partial and shelterwood totals) in 2008, an 8% decrease from 487,448 acres in 2007.
- The number of harvests reported decreased from 5,675 to 5,329.

Clearcutting:

1. The total area clearcut decreased, from 11,065 acres in 2007 to 10,069 acres in 2008. Clearcutting amounts to less than 3% of total harvested acres.
2. Landowners owning more than 100,000 acres in Maine created 94% of all clearcuts (9,508 acres).
3. Average clearcut size in 2008 was 25 acres. Landowners owning more than 100,000 acres had an average clearcut size of 27 acres. Landowners owning less than 100,000 acres had an average clearcut size of 11 acres. One clearcut larger than 75 acres was created in 2008.
4. The primary silvicultural reason for clearcutting reported by large landowners was the removal of poor quality, intolerant, under stocked, short lived or mature overstories where the retention of the residual overstory trees is not justified for further increase in value, as a source of seed, or for protection of the new stand.

Land Use Changes:

- Harvesting to convert land from forest management to some other land use decreased -34% from 7,365 acres in 2007 to 4,846 acres in 2008.

Precommercial Silvicultural Activities

Herbicide Use:

- For site preparation decreased -53%, from 972 acres in 2007 to 452 acres in 2008.
- To release crop trees from competing vegetation decreased 11%, from 9,786 acres in 2007 to 8,747 acres in 2008.

Timber Stand Improvement (TSI):

- Precommercial thinning of young stands with spacing saws increased 15%, from 7,795 acres in 2007 to 8,947 acres in 2008.
99% of this activity was done by landowners owning more than 100,000 acres.

Planting:

- Tree planting decreased -15%, from 4,593 acres in 2007 to 3,884 acres in 2008.
98% of the planting was by landowners owning more than 100,000 acres.

Forester Involvement

- In 2008, licensed foresters supervised harvesting on 306,888 acres, compared to 362,509 acres in 2007.
66% of all harvest acres in 2008 had a licensed forester involved; the same as 2007.
- Licensed Forester supervision occurred on 22% (557 out of 2,581 harvests) of the harvests on small woodlots (≤ 100 acres) in 2008. This is a slight decrease from 24% in 2007 (680 out of 2,840 harvests).

Definitions:

- Ownership Type**
- Forest Industry Land:** Woodlands owned by a forest products industry; usually most of the wood harvested is used by that industry.
- Investor Timberlands** Woodlands owned by organizations, including Timberland Investment Management Organizations (TIMOs) and Real Estate Investment Trusts (REITs) that hold timberland assets as fiduciaries for the benefit of others.
- Non-Industrial Land:** Woodlands privately owned but NOT by a forest industry. These include private individuals and other non-forest product industries.
- Other woodlands:** Woodlands owned by other entities not listed above -- including local, state, federal, or tribal governments.
- Types of Harvests**
- Partial Harvest:** Harvest where trees are removed individually or in small (<5 acre) patches.
- Shelterwood:** Harvest of mature trees from a forest site in two or more stages. The first stage removes only a portion of the trees to allow establishment of regeneration before the remaining trees are removed in subsequent harvest.
- Clearcut:** Harvest on a site larger than 5 acres that results in a residual basal area of acceptable growing stock trees >4.5" DBH of less than 30 square feet per acre, unless after harvesting the site has a well-distributed stand of acceptable growing stock 3 feet tall for softwood and 5 feet for hardwoods (Overstory Removal). Refer to the latest copy of the Maine Forest Service Rules Chapter 20 for additional information. It can be found on the Maine Forest Service website at http://www.state.me.us/doc/mfs/rules_regs/index.htm
- Change of Land Use.** Harvest conducted to convert forestland to another land use such as house lots, farm pastures, etc.

Harvesting Trends in Maine 2003-2008

2008 Annual Report on Clearcutting and Precommercial Activities

Compiled from the 2008 Landowner Reports and other survey instruments. Data collected under the provisions of the Forest Resources Assessment Program, 12 MRSA § 8878-A

State Total:	8,815	3,789	1	125	6,453	61	2,880	114	9,508	27	132	95	561	11	10,069

Purposes for creating clearcut:

1. Removal of poor quality, intolerant, under stocked, short lived or mature overstories where the retention of the residual overstory trees is not justified for further increase in value, as a source of seed, or for protection of the new stand.
2. Ecologically appropriate improvement or creation of wildlife habitat.
3. Removal of stands that, if partially harvested according to accepted silvicultural practice, are at high risk for windthrow due to factors such as soils, rooting depth, crown ratio or stem quality.
4. Harvesting of an existing plantation or other forest stand established by or previously treated with precommercial silvicultural activities.
