Introduction

In 1974, the Legislature established the Maine Critical Areas Program, and charged the State Planning Office to conduct statewide surveys to identify significant botanical, geological, zoological and scenic areas worthy of preservation. During the past eleven years, the program has produced over 200 reports, brochures, and fact sheets. These reports contain a substantial amount of scientific information on rare features in Maine. Copies of all the program's publications are provided to over 18 libraries, and thus are available to the public to borrow. A list of these libraries appears on page . Within reason the Office will provide requested copies of the program's reports. There is a charge for some of the reports.

There are four types of reports: planning reports, botanical fact sheets, educational brochures, and miscellaneous reports.

Planning reports provide technical scientific background on particular species or land features. They are primarily designed for scientists and researchers.

Botanical fact sheets are two page summaries of the biology of particular species of rare plants in Maine that provide a description of the plant, its distribution in Maine and assessment of its rarity and significance.

Educational brochures are designed to provide general information about some of Maine's plants, wildlife and natural features, both rare and familiar, to meet the interests of the general public.

Miscellaneous reports cover a wide range of subjects. Often they are the results of specific inventions of state-owned lands, or the compilation of critical area information.

To order, please write to the Maine Critical Areas Program, State Planning Office, State House Station # 38, Augusta, Maine 04333. For those publications for which there is a charge, please make check payable to the Maine State Planning Office.
