- ➡ The market values listed in this report represent prices paid to Maine Landowners in 1998.
- ➡ Current prices will likely vary.
- ➡ See Factors Influencing Stumpage Prices of Forest Products on the inside front cover.
- ➡ Contact your Maine Forest Service Forester for more detailed information;
- ➡ Call 1-800-367-0223 to find the phone number of your local Maine Forest Service Forester.

About the 1998 Stumpage Price Report

What is in this report?

This report lists the stumpage prices paid to Maine woodland owners during the calendar year 1998.

How was this information collected?

The Maine Forest Service (MFS) collects information on timber harvesting through notification and landowner reporting. The price information contained in this report is based on the 1998 landowner reports.

What is the purpose of the Annual Landowner Reports?

Each year, the Maine Forest Service collects information from forest landowners regarding the stumpage prices, volumes of timber harvested, and harvest acreage in Maine.

This confidential information is used for three primary purposes:

- ➡ to calculate valuations for lands enrolled in the Tree Grow Tax Program,
- ➡ to calculate and publish stumpage price descriptive statistics, in a format which maintains landowner confidentiality, and
- ➡ to quantify harvest area and forest management techniques.

This report is arranged so that you can look up stumpage prices by county. The information in this report is organized into eight product sections: Biomass, Boltwood, Firewood, Palletwood, Pulpwood, Sawlogs, Studwood, Veneer. The price statistics are average, minimum, maximum, and the number of reports used to calculate the average. The statistics appear by product and species for each county.

If there were three or fewer reports for a product and species in one county, the price statistics were left blank and reported on the State Summary Page. Species not listed for a product indicate that no reports were filed reporting that product and species combination.

FACTORS INFLUENCING STUMPAGE PRICES of FOREST PRODUCTS

Stumpage prices on a given harvest are influenced by a number of factors including but not limited to the following:

- ➡ Percentage of the timber species in the area
- ➡ Volume to be cut per acre or Total harvest volume
- ➡ Size of average tree to be cut
- ➡ Timber quality
- ➡ Logging terrain
- ➡ Distance to public roads
- ➡ Type of logging equipment
- ➡ Season of year
- ➡ Woods labor cost
- ➡ Landowner needs or special requirements
- ➡ Capital gains aspects of Internal Revenue Code
- ➡ Market demand
- ➡ Distance to market
- ➡ Property taxes
- ➡ End product of manufacture
- ➡ Landowner knowledge of market value
- ➡ Sale by competitive bid
- ➡ Type of harvest: i.e., partial or clearcut
- ➡ Regulatory constraints

Any one of the above factors can have a significant effect on stumpage prices for a species, while another factor may have an insignificant effect in a particular area.

DEFINITIONS AND NOTES

Average:

The average price (or mean) is calculated by multiplying the corresponding volume by their stumpage price for each species and product reported by woodland owners. These are added together and dividing by the sum of all the volumes (reported with corresponding stumpage prices) for that product and species. This is a weighted average.

Biomass:

Above ground portion of tree that is chipped on site. Usually the whole tree but sometimes only the tops and branches.

Cords (cds):

(MFS Rules Chapter 20 Definition). A cord is a unit of measure of wood products 4 feet wide, 4 feet high, and 8 feet long, or its equivalent, containing 128 cubic feet when the wood is ranked and well stowed. Any voids that will accommodate a stick, log or bolt of average dimensions to those in the pile shall be deducted from the measured volume.

Max(imum):

The maximum price is the highest price reported (edited to remove errors).

(Mbf):

One thousand board feet. One (board foot) is a piece of wood 1" thick by 12" long by 12" wide.

Min(imum):

The minimum price is the lowest price reported (edited to remove errors).

Pulpwood:

Though reported in three different units (cords, tons, and lbs.), this report uses only cords as the common denominator. For conversions, see back page of this report..

Reports(Rpts):

The number of reports upon which the statistics were calculated. IF there were three or fewer reports for a product and species in one county, the price statistics are not reported at the county level (to preserve confidentiality). There may be a statewide price however.

Stumpage:

The value of standing trees. (MFS Rules Chapter 20 Definition)
