## Preface

Dislocated workers who are able to confidently identify their knowledge, skills, and abilities (KSAs) will be more successful in their job search and career advancement over those who rely on past experience, former job titles, and industry associations. In modern labor markets, KSAs are primary determinants of employment qualifications among occupations and industries.

To maximize reemployment prospects for these workers, we need to assist them with locating new employment opportunities that require similar KSAs. For workers seeking career advancement or qualifications for new jobs, we need to assist them in gauging the skills gap they have in relation to target occupations and careers. Workforce boards must also be able to alert economic development agencies and businesses in the region seeking to expand by communicating skills based information about the new pool of workers that is available as a result of layoffs or plant closings.

The Maine Department of Labor, Center for Workforce Research and Information is committed to the analysis of structural changes in the Maine economy. The information in this report is intended to facilitate the movement of Maine workers from industries in decline to other employers with growing need for skilled workers.

Questions or comments should be addressed to Merrill Huhtala at (207) 621-5196 or [merrill.s.huhtala@maine.gov](mailto:merrill.s.huhtala@maine.gov).

## Company and Industry Background

The pulp and paper industry in Maine has had a long, proud history dating back over 270 years to the first mill in Westbrook. International competition, investments in other regions of the nation, environmental issues, and a range of other factors hit the industry, which has shed thousands of jobs in the last decade.

The Domtar mill in Baileyville was built over 100 years ago by the St. Croix Paper Company. A 2007 shutdown of paper making operations displaced over 150 workers. Since then the mill has only produced pulp wood for shipments to other mills in Maine, Canada, Europe, and Asia. With historically low prices on pulp wood and high inventories the future of the mill is uncertain.

## Labor Market Conditions

Workforce conditions in the Calais area have been depressed for many years with high unemployment and a declining population. The steady decline of manufacturing and natural resource jobs coupled with slower growth in the service sector make re-employment in the region difficult. The recession has adversely impacted all regions of the state, but the closure of the largest employer in the region will impact the surrounding communities and support industries particularly hard. Finding suitable re-employment for the recently displaced workers is likely to be more difficult than at any other time in more than a decade.

## Characteristics of the Affected Workers

Demographic information was collected from 256 employees during Rapid Response sessions. Workers reported age ranged from 26 to 67, with an average of 52 and average job tenure of 27 years. 89 percent were male, 29 percent were veterans, 57 percent completed high-school, and 36 percent completed some level of postsecondary training. Reported wages ranged from a low of \$18.03 to a high of \$39.58 per hour.

### Jobs in Demand – Current Job Openings in Maine

The duties of the affected workers fit into numerous Standard Occupational Classification (SOC) job titles, such as:

- 47-2073 Operating Engineers
- 47-2111 Electricians
- 49-9044 Millwrights
- 51-9012 Separating, Filtering, Clarifying, Precipitating, & Still Machine Operators, Setters, and Tenders
- 51-9198 Helpers, Production Workers

Occupational analysis reports matched to all reported job titles of the affected workers are included in the pages that follow.

A May 2009 search of job postings on the Maine CareerCenter's Labor Exchange On the Net (LEON) job bank produced 27 postings for jobs of any type within 30 miles of Baileyville. When the search radius was widened to 50 miles the search produced 62 postings. When the keywords "manufacturing" and "production" were added there were 2 job postings in each category. An additional 4 postings appeared within 50 miles of Baileyville under

Characteristic	Workers	Characteristic	Workers
<b>Age</b>		<b>Town of Residence</b>	
Less than 40	15	Baileyville	83
40 to 49	72	Calais	42
50 to 59	130	Princeton	39
60 and over	32	Alexander	18
Average Age = 52		Pembroke	13
<b>Job Tenure</b>		Robbinston	7
0 to 10	15	Baring	7
10 to 19	39	Lubec	6
20 to 29	99	Charlotte	5
30 and over	102	Meddybemps	5
Average Tenure = 27 years		Other	31

the category of “laborer.” These listings are posted by employers with job openings in Maine, through the Maine CareerCenter system ([www.maineccareercenter.com](http://www.maineccareercenter.com)). Another useful resource is America’s Job Exchange ([www.americasjobexchange.com](http://www.americasjobexchange.com)), which offers job postings nationwide. There are many other job search sites available. CareerCenter staff are available to assist customers in locating sites most suited to their needs.

## **Re-Employment Prospects and the Employment Outlook**

Re-employment in the pulp and paper industry is unlikely for most of the displaced workers. The economic base of the region continues to shift away from manufacturing into service-providing industries. Industries projected to gain the most jobs through 2014 include food services, health care, social assistance, and retail. Manufacturing of paper, wood, textiles, food, and miscellaneous products are among those industries projected to lose the most jobs.

While employment in production related occupations is projected to decline, some job openings will occur to meet replacement demand as remaining workers retire or otherwise leave the workforce. As the nearby table indicates, most job growth and job openings are expected in food preparation and serving, sales, healthcare, and management occupations.

High-paying jobs in growing occupations generally require specific technical skills. The skill sets of many displaced production workers are not readily transferable to occupations common to growing industries, thus limiting their re-employment opportunities. (Industry and occupational projection information is provided in Appendices A - D at the back of this report.)

## **Retraining Possibilities**

The comparison analysis reports, or profiles provided in this report represent occupations determined to be related through use of the TORQ (Transitional Occupation Relationship Quotient) software and O\*NET. These comprehensive reports compare abilities, knowledge, and skills of the occupation most recently held to a TORQ related occupation. Related occupations were selected based on their Grand TORQ Score, and level of employment in Northern Maine. Occupations defined by TORQ as related but with no reportable employment in Northern Maine are not included. Also, occupations defined as related may themselves be declining, and therefore considered with caution as employment options. In many instances, job openings exist to meet replacement demand rather than as new, growth-related jobs. This is particularly true during periods of economic decline. It should be noted that TORQ Comparison Reports are large, sometimes in excess of 10 pages for each related occupation. As such, only the top 5 or 6 related occupations are included for each primary occupation.

Counselors should also consider that many workers have experience, hobbies, and interests beyond those acquired in their most recent employment. These attributes may lead to the exploration of training opportunities not at all related to the affected worker’s former employment.

Clients should work with CareerCenter counselors to assess their skills and identify options for possible entry into occupations projected to grow in upcoming years. Brochures such as *Hot Jobs in Maine* and Internet resources such as America’s Career InfoNet, Career Voyages, and the Maine Employment Info Guide can help clients make career choices in today’s economy. As an alternative to long-term retraining, workers and placement specialists should look at the matched TORQ Comparison Report for a list of largest employing industries as a source of potential job openings.

**Projected Employment by Occupational Group in Northern Maine, 2004 to 2014 by Net Change**

Occupational Group	Employment			Avg Annual Openings
	2004	2014	Net Change	
Healthcare Practitioners and Technical Occupations	2,984	3,230	246	82
Food Preparation and Serving Related Occupations	3,563	3,751	188	159
Healthcare Support Occupations	1,721	1,878	157	41
Community and Social Services Occupations	1,283	1,390	107	35

Farming, Fishing, and Forestry Occupations	1,875	1,787	-88	46
Production Occupations	3,301	2,904	-397	82
Office and Administrative Support Occupations	6,455	6,031	-424	161

**Transferable Skills**

Every occupation has skill requirements that are transferable to other occupations. TORQ is a powerful application developed by Workforce Associates, Inc. which determines the Transferable Occupation Relationship Quotient of an occupation based on the abilities, skills, and knowledge associated with that occupation. TORQ harnesses the power of O\*NET (<http://online.onetcenter.org/>) to perform an analysis of occupational attributes to produce a single Grand TORQ Score that defines the transferability from one occupation to another. TORQ is currently in use by the Center for Workforce Research and Information (CWRI), of the Maine Department of Labor.

A transferable skills match reveals potential occupations for which an applicant may desire to pursue. The client's previous employment experience and personal interests will also play major roles in developing any training plan.

## Job Titles, Number of Workers, and Equivalent Occupational Codes

Occupational information provided by the affected Domtar workers was coded into 64 SOC occupations, and 65 O\*NET classifications. These classifications are the basis for developing the TORQ Comparison Reports, or TORQ analyses. These comparative analyses match the abilities, skills, and knowledge of one occupation to another determined to be related by the TORQ software. The TORQ Comparison allows users to assess skills gaps that exist for workers choosing their next career path. Occupational matching and coding to the Standard Occupational Classification was based on worker responses. Occupations employed at Domtar Paper but not previously reported may be encountered by CareerCenter staff. Use of O\*NET and the Dictionary of Occupational Titles cross-walk search will be useful in matching additional occupations. Counselors may also contact the Center for Workforce Research and Information for assistance.

REPORTED JOB TITLES	WORKERS	SOC	MATCHED SOC OCCUPATION TITLE
<a href="#">Management</a>	1	11-1021	General and Operations Managers

## TORQ Analysis Notes

Information provided in the TORQ Comparison Reports that follow is derived from several sources. The Grand TORQ score is determined by the TORQ comparison of abilities, skills, and knowledge of one occupation to another. TORQ comparison reports were developed for the top 5 related occupations as determined by the Grand TORQ score. Related occupations for which no employment exists in Maine's Northern Region (Aroostook and Washington Counties) were not included.

TORQ scores may be interpreted as follows, within these value ranges:

TORQ Value	Interpretation
Above 95	The two occupations are virtually identical
90 – 95	The prospects for transition are excellent. No major ability barriers; minimal investment of time and money should close gaps in skills and/or knowledge.
85 – 89	Prospects are good for transition. There are likely to be a few more gaps in skills and knowledge that will need filling in some cases.
80 – 84	Fair prospects for transition with significant investment in training and/or education.
75 – 79	Some gaps likely to pose serious challenges for transition
Below 75	Some abilities, skills, and knowledge may be seriously misaligned. Prospects for transition are not particularly good, although not impossible, depending on individual circumstances.

Wage information provided in the TORQ Comparison Reports are 2007 Maine Statewide median annual wages. Hourly rates can be calculated by dividing the annual figure by 2,080 (40 hours per week at 52 weeks per year). Labor Market Comparison data are derived from the 2006 to 2016 occupational projections for Maine, and are statewide figures. Top Industry tables are derived from national staffing pattern data. The ASK Analysis, Experience and Education Comparison, Job Zone, and other information are obtained from the most recent O\*NET database. Please contact Merrill Huhtala ([Merrill.s.huhtala@maine.gov](mailto:Merrill.s.huhtala@maine.gov)) (telephone 207-621-5196) at the Center for Workforce Research and Information for assistance in interpreting the contents of these reports.
