Preface

Dislocated workers who are able to confidently identify their knowledge, skills, and abilities (KSAs) will be more successful in their job search and career advancement over those who rely on past experience, former job titles, and industry associations. In modern labor markets, KSAs are primary determinants of employment qualifications among occupations and industries.

To maximize reemployment prospects for these workers, we need to assist them with locating new employment opportunities that require similar KSAs. For workers seeking career advancement or qualifications for new jobs, we need to assist them in gauging the skills gap they have in relation to target occupations and careers. Workforce boards must also be able to alert economic development agencies and businesses in the region seeking to expand by communicating skills based information about the new pool of workers that is available as a result of layoffs or plant closings.

The Maine Department of Labor, Center for Workforce Research and Information is committed to the analysis of structural changes in the Maine economy. The information in this report is intended to facilitate the movement of Maine workers from industries in decline to other employers with growing need for skilled workers.

Questions or comments should be addressed to Merrill Huhtala at (207) 621-5196 or merrill.s.huhtala@maine.gov.

Company and Industry Background

Maine has a long, illustrious boat and shipbuilding tradition. The first ship the English built in the New World was on the banks of the Kennebec River. The Hinckley Company is a major employer in Maine's boat building industry, comprising nearly one-quarter of the industry's average employment from 2000 to 2008.

Founded in 1928 as Hinckley Yachts, the Hinckley name is renowned for its luxury sailing yachts and jet-powered picnic boats. In addition to building boats, The Hinckley Company operates full-service boatyards on the East Coast from Maine to Florida, providing yacht refit, maintenance, repair and storage services for boats up to 150 feet in length and 180 tons, and yacht brokerage, charter and retail services.

With the United States' entry into World War II, Hinckley Yachts secured contracts for military boats. Over the course of the war, the company built more than 500 picket boats, tow boats and yawls for U.S. forces. Originally known for its wooden boats, Hinckley was an early leader in the use of fiberglass in hull construction and has continued to lead the industry in the use of new materials, design and technologies.

The company is now headquartered in Portsmouth, Rhode Island, and employs a reported 740 workers with revenue of \$69.4 million. The Trenton, Maine manufacturing plant opened in 1998 and at its peak earlier this decade employed more than 400 people building Hinckley Picnic Boats. The Picnic Boat was the first pleasure boat in its class to use an innovative water jet system that eliminated the need for a propeller.

As the economy faltered and demand for luxury yachts fell, the company began reducing its workforce at the Trenton facility beginning in October 2008. Four rounds of layoffs have since occurred and the total jobs lost now stands at 152 workers. The last workers are expected to be laid off and the plant closed in early July 2009.

Labor Market Conditions

Workforce conditions in the Ellsworth area have declined relative to the state, characterized by lower rates of labor force growth and higher annual unemployment rates compared to the state since 2001. The area has experienced a decline in overall employment, accelerated job losses in the goods-producing sector comprised of manufacturing, natural resources and construction industries, and relatively slow growth in the service sector.

The recession has adversely impacted all regions of the state, but the closure of a prominent manufacturing facility in the region will impact the surrounding communities and support industries particularly hard. Finding suitable re-employment for the recently displaced workers is likely to be more difficult than at any other time in more than a decade.

Characteristics of the Affected Workers

Demographic information was collected from 73 employees during Rapid Response sessions. Workers reported job tenure from less than 1 year to 30 years, with an average of 9 years. 80 percent were male, 21 percent were veterans, 59 percent completed high-school, and 37 percent completed some level of postsecondary training. Reported wages ranged from a low of \$10.90 to a high of \$23.75 per hour.

Characteristic	Workers	Characteristic	Workers
Age (years)		Town of Residence	
Fewer than 30	6	Ellsworth	11
30-39 years	18	Hancock	6
40-49 years	21	Bass Harbor	5
50+ years	28	Trenton	5
Average Age = 46 years		Orland	4
Job Tenure (years)		Other Towns	42
0 to 10	54		
10 to 19	12		
20 to 29	5		
30 and over	1		
Average Tenure = 9 years			

Jobs in Demand – Current Job Openings in Maine

The duties of the affected workers fit into numerous Standard Occupational Classification (SOC) job titles, such as:

- 47-2031 Carpenters
- 51-2091 Fiberglass Laminators and Fabricators
- 49-3051 Motorboat Mechanics

Occupational analysis reports matched to all reported job titles of the affected workers are included in the pages that follow.

A July 2009 search of job postings on the Maine CareerCenter's Labor Exchange On the Net (LEON) job bank produced 37 postings for jobs of any type within 30 miles of Trenton. When the search radius was widened to 50 miles the search produced 244 postings. When the keywords "manufacturing", "production", "boats" were added there were no job postings in these categories within 30 miles; yet 7 postings appeared within 50 miles of Trenton under the category of "production", 3 postings in "manufacturing", and just 1 posting for "boats". These listings are posted by employers with job openings in Maine, through the Maine CareerCenter system (www.mainecareercenter.com). Another useful resource is America's Job Exchange (www.americasjobexchange.com), which offers job postings nationwide. There are many other job search sites available. CareerCenter staff is available to assist customers in locating sites most suited to their needs.

Re-Employment Prospects and the Employment Outlook

Re-employment in the boat building industry, which has been hard hit by the recession, is unlikely for most of the displaced workers. The economic base of the region continues to shift away from manufacturing into service-providing industries. Industries projected to gain the most jobs through 2014 include food services, health care, social assistance, and professional and business services. Manufacturing of transportation equipment, wood, textiles, food, and furniture products are among those industries projected to lose the most jobs.

While employment in production related occupations is projected to decline, some job openings will occur to meet replacement demand as remaining workers retire or otherwise leave the workforce. As the nearby table indicates, most job growth and job openings are expected in service occupations, in professional occupations, and in management and business occupations, in such fields as health care, personal services and food services.

High-paying jobs in growing occupations generally require specific technical skills. The skill sets of many dislocated production workers are not readily transferable to occupations common to growing industries, thus limiting their re-employment opportunities. (Industry and occupational projection information is provided in Appendices A - D at the back of this report.)

Retraining Possibilities

The comparison analysis reports, or profiles provided in this report represent occupations determined to be related through use of the TORQ (Transitional Occupation Relationship Quotient) software and O*NET. These comprehensive reports compare abilities, knowledge, and skills of the occupation most recently held to a TORQ related occupation. Related occupations were selected based on their Grand TORQ Score, and level of employment in Northeastern Maine. Occupations defined by TORQ as related but with no reportable employment in Northeastern Maine are not included. Also, occupations defined as related may themselves be declining, and therefore considered with caution as employment options. In many instances, job openings exist to meet replacement demand rather than as new, growth-related jobs. This is particularly true during periods of economic decline. It should be noted that TORQ Comparison Reports are large, sometimes in excess of 10 pages for each related occupation. As such, only the top 5 or 6 related occupations are included for each primary occupation.

Counselors should also consider that many workers have experience, hobbies, and interests beyond those acquired in their most recent employment. These attributes may lead to the exploration of training opportunities not at all related to the affected worker's former employment.

Clients should work with CareerCenter counselors to assess their skills and identify options for possible entry into occupations projected to grow in upcoming years. Brochures such as Hot Jobs in Maine and Internet resources such as America's Career InfoNet, Career Voyages, and the Maine Employment Info Guide can help clients make career choices in today's economy. As an alternative to long-term retraining, workers and placement specialists should look at the matched TORQ Comparison Report for a list of largest employing industries as a source of potential job openings.

Employment by Occupational Group in Northeastern Maine, 2004 and Projected 2014				
Occupational Group	Employment			Avg. Annual Openings
	2004	2014	Net Change

Production Occupations	6,424	5,928	-496	165

Details may not add to totals due to rounding.

Transferable Skills

Every occupation has skill requirements that are transferable to other occupations. TORQ is a powerful application developed by Workforce Associates, Inc. which determines the Transferable Occupation Relationship Quotient of an occupation based on the abilities, skills, and knowledge associated with that occupation. TORQ harnesses the power of O*NET (<http://online.onetcenter.org/>) to perform an analysis of occupational attributes to produce a single Grand TORQ Score that defines the transferability from one occupation to another. TORQ is currently in use by the Center for Workforce Research and Information (CWRI), of the Maine Department of Labor.

A transferable skills match reveals potential occupations for which an applicant may desire to pursue. The client's previous employment experience and personal interests will also play major roles in developing any training plan.

Job Titles, Number of Workers, and Equivalent Occupational Codes

Occupational information provided by the Hinckley workers was coded into 22 SOC occupations, and 22 O*NET classifications. These classifications are the basis for developing the TORQ Comparison Reports, or TORQ analyses. These comparative analyses match the abilities, skills, and knowledge of one occupation to another determined to be related by the TORQ software. The TORQ Comparison allows users to assess skills gaps that exist for workers choosing their next career path. Occupational matching and coding to the Standard Occupational Classification was based on worker responses. Occupations employed at Hinckley but not previously reported may be encountered by CareerCenter staff. Use of O*NET and the Dictionary of Occupational Titles cross-walk search will be useful in matching additional occupations. Counselors may also contact the Center for Workforce Research and Information for assistance.

REPORTED JOB TITLES	WORKERS	SOC	MATCHED SOC OCCUPATION TITLE
Treasurer	1	11-3031	Financial Managers

cleaning	1	53-5011	Sailors and Marine Oilers
	1	53-7061	Cleaners of Vehicles and Equipment

TORQ Analysis Notes

Information provided in the TORQ Comparison Reports that follow is derived from several sources. The Grand TORQ score is determined by the TORQ comparison of abilities, skills, and knowledge of one occupation to another. TORQ comparison reports were developed for the top 5 related occupations as determined by the Grand TORQ score. Related occupations for which no employment exists in Maine's Northeastern Region (Hancock, Penobscot, and Piscataquis Counties) were not included.

TORQ scores may be interpreted as follows, within these value ranges:

TORQ Value	Interpretation
Above 95	The two occupations are virtually identical
90 – 95	The prospects for transition are excellent. No major ability barriers; minimal investment of time and money should close gaps in skills and/or knowledge.
85 – 89	Prospects are good for transition. There are likely to be a few more gaps in skills and knowledge that will need filling in some cases.
80 – 84	Fair prospects for transition with significant investment in training and/or education.
75 – 79	Some gaps likely to pose serious challenges for transition
Below 75	Some abilities, skills, and knowledge may be seriously misaligned. Prospects for transition are not particularly good, although not impossible, depending on individual circumstances.

Wage information provided in the TORQ Comparison Reports is 2007 Maine Statewide median annual wages. Hourly rates can be calculated by dividing the annual figure by 2,080 (40 hours per week at 52 weeks per year). Labor Market Comparison data are derived from the 2006 to 2016 occupational projections for Maine, and are statewide figures. Top Industry tables are derived from national staffing pattern data. The ASK Analysis, Experience and Education Comparison, Job Zone, and other information are obtained from the most recent O*NET database. Please contact Merrill Huhtala (Merrill.s.huhtala@maine.gov or 207-621-5196) at the Center for Workforce Research and Information for assistance in interpreting the contents of these reports.
