## AMONG THE FARMERS.

"SPREAD THE PLOW."

Correspondence on practical agricultural topics is solicited. Address all communications to D. HAMMOND, Agricultural Editor Oxford Democrat, Paris, Me.

**Old Lands Made New With Clover.**  
There are but few stock raisers and those of indifferent success in their calling, who do not understand that if any profit is obtained from the animals they raise they must be fed above the amount of food necessary to maintain life. Only from the surplus food over and above the amount needed to keep the balance between starvation and natural growth can a profit be obtained. A certain quantity is necessary in order to break even.

The virgin soil contained the elements for the raising of good crops for many years, but in very many cases the supply has not been renewed in sufficient quantities to insure any but an inferior crop of any kind. I have found that the manure and clover seed before the crops on the farm will not keep the land up to its highest state of productivity.

Each of it is a fact that the soil this supply the land grows a little poorer year by year. This is shrinking the capital stock as well as diminishing the income from it.

Commercial fertilizers are not always the best investment to replenish the soil, although they are good in their proper place. Attention being given to the raising of crops that will enrich the soil, instead of depleting it. For our New England farmers, the best fertilizer is the old-fashioned red clover.

I obtained the best results from plowing and just after hay was harvested and seeding to clover. The clover gets a good start through the fall, as do also the weeds, but the weeds will not mature to form seed before the clover seeds them. Unless the winter is very open the clover will not winterkill and will cut a good crop the next spring.

Just before frost plow this under and whatever crop you follow it with you will be surprised. Planted to potatoes and corn, the clover will grow up and follow the growing crop to grass with oats and give a good crop of oats and a catch of grass that will last for many years. I have used it to grain with clover in the spring, mowed it the following summer and then used it the second crop with surprising good results.

This method comes somewhere between the soil and the soil, and is a state. Cows, or peas of any kind, will furnish the same elements, but I do not find so much profit in them as in the clover. Care should be used that the clover seed is pure and vital. If one can raise his own seed he knows what it is, and how old it is. Clover seed is little work to test before sowing. I venture to say from my experience that a farmer will get more from his soil by sowing it. It will restore old, worn-out land to almost new land if plowed repeatedly. Sow, cure one crop, plow the seed under, and then a crop of grain, roots or hay, then repeat until the land is enriched to satisfaction.

The poorest land on the farm may be made to produce a lush green crop in given a few years of this treatment. It is not an expensive method and is akin to nature's own way of feeding the soil. If you expect the soil to feed you, we must feed the soil and feed it with the food it needs to make it vigorous and healthy. The plowing under of the stable manure and the use of the stable manure and as much commercial fertilizer as is needed should keep the farm constantly in the state of a green crop, and not a fallow, safe and sure investment.

C. J. Whitshire, Orleans County, Vt., in New England Homestead.

**Poultry Work at the Maine Station.**  
The Maine Agricultural Experiment Station is now mailing bulletin No. 15, entitled, "Poultry Work at the Maine Station." The poultry investigation since 1897 was up to January 1, 1908, under the management of the late Professor Gilbert L. Gowell. The object of this bulletin is to give a summary of the work that was accomplished under Professor Gowell and to briefly outline the work which is now being done at the station. It is intended for the future. The work of the experiment station with poultry has been and will be along two lines: poultry management and poultry breeding.

In the plans for future work the poultry management investigation will be continued. From year to year definite, practical experiments on topics in poultry management will be tried with large numbers of birds.

The work in poultry breeding will be followed along two general lines. The past experience of the station in this respect is the individual performance of a hen in respect to egg production is not necessarily an adequate indication of her desirability as a breeder. The work in this respect is to be followed along two general lines. The past experience of the station in this respect is the individual performance of a hen in respect to egg production is not necessarily an adequate indication of her desirability as a breeder.

## New York Cheese Trade.

PRICES WELL MAINTAINED AND THE REASONS—IMPROVEMENTS IN MANUFACTURE.

By O. HENRY.

The cheese situation has happily surprised every one. Prices have advanced right in the face of expected decline, 1-2 cents for June cheese is high, and buyers are plenty. The make is light, as generally reported by the trade and by the producers.

Each year more and more cheese milk goes into the city trade; not alone for New York—the inland towns and cities are constantly making out more cheese. These changes are to some extent affecting the market prices, but are not at all affecting the general condition of the milk cows in cheese sections, so far as the writer's observation has gone, is exceedingly bad. This condition of the country is measurably responsible for a light crop. In the milk sections more grain was fed, because milk prices would pay cost, even if no profit remained; but in the cheese sections less milk is produced, and so cows were fed only coarse fodder, which were scarce and high.

These cows can't spring wretchedly good this summer. I often wonder if any farmer can make a profit on a cow that has to be milked for a year or more. Small, poor cows, half fed, are seen upon a thousand hills. They cannot make the owner a profit, and they are a constant drain on the farmer's pocket.

Said an old and prominent dealer a few days ago: "I do not want to milk a cow that has to be milked for a year or more. I want a cow that will give me a good crop of milk in a short time." "You know," said he, "that people want June cheese for a year or more. I want a cow that will give me a good crop of milk in a short time."

Said an old and prominent dealer a few days ago: "I do not want to milk a cow that has to be milked for a year or more. I want a cow that will give me a good crop of milk in a short time." "You know," said he, "that people want June cheese for a year or more. I want a cow that will give me a good crop of milk in a short time."

Said an old and prominent dealer a few days ago: "I do not want to milk a cow that has to be milked for a year or more. I want a cow that will give me a good crop of milk in a short time." "You know," said he, "that people want June cheese for a year or more. I want a cow that will give me a good crop of milk in a short time."

WASHBURN-CROSBY'S

# GOLD MEDAL FLOUR

But the Grocer  
has more —  
Thank Goodness.

A black and white illustration of a woman in a long, flowing dress with a high collar and a full skirt. She is holding a large, tall bag of flour. The bag has a circular logo on it that reads "GOLD MEDAL" and "WASHBURN-CROSBY'S". The woman is looking towards the left. The background is dark and textured.
