Surficial Materials

This map shows the locations of surficial materials and the geology, independent of which are derived from soil, surficial deposits, and water bodies. The data were compiled from a variety of sources, including aerial photographs, ground surveys, and records of previous investigations. The map provides a detailed view of the surficial materials present in the area. The material types are classified into categories such as sand, gravel, clay, and organic materials. Each category is represented by different symbols and colors, allowing for easy identification.

The map includes contour lines to indicate variations in elevation. The scale of the map is 1:24,000, with a contour interval of 10 feet. True north is indicated, and the map is oriented with the north direction at the top.

Materials and Land Use:
- **SAND**
  - Coarse sands
  - Fine sands

- **GRAVEL**
  - Medium gravels
  - Small gravels

- **CLAY**
  - Common clays

- **ORGANIC MATERIALS**
  - Peat

- **DEBRIS**
  - Rock fragments

**Legend:**
- **Debris**
- **Organic materials**
- **Debris**
- **Meltwater**
- **Organic materials**
- **Debris**
- **Rock debris**
- **Meltwater**
- **Organic materials**
- **Debris**
