Surficial Materials

Location: Scrally Lake Quadrangle, Maine

Contributors:
- Supervising Geologist: Robert G. Harrington
- Advisory Committee: Maine Geological Survey
- Digital Mapping by: Thomas S. Middel

This map shows natural surficial materials in the Scrally Lake quadrangle, Maine. The map is based on the Maine Geological Survey's data and includes information on the distribution of different surficial materials.

**Geological Processes:**
- Weathering and erosion:
  - Residual materials form after rock weathering.
  - Sedimentary materials result from the deposition of weathered materials.

**Surficial Materials Classification:**
- Materials are classified based on their origin, texture, and composition.

**Map Features:**
- Legend showing materials and their characteristics.
- Scale and legend for interpreting the surficial materials.

**Additional Information:**
- Map scale: 1:24,000
- Contour interval: 20 feet
- True north orientation

---

**Surface Materials:**
- Residual materials:
  - Developed from bedrock
  - Sedimentary materials:
  - Depicted on the map with distinct colors and symbols.

---

**Map References:**
- Maine Geological Survey:
  - Open-File No. 01-315
  - 2001 publication

---

**Map Credits:**
- Maine Geological Survey:
  - Produced in cooperation with the Maine Geological Survey.

---

**Map Limitations:**
- The map is an interpretation of the surficial materials and is subject to errors in data and interpretation.
- It is intended for general use and should not be used for site-specific applications.
