A Car Load of the

McHenry-Millhouse Asphalt

Shingles and Roll Roofing

The McHenry-Millhouse Asphalt Shingles and Asphalt Prepared Roofing in Rolls are rendering Service and Satisfaction on all types of buildings throughout the United States. Millions of buildings from the most pretentious residences down to temporary structures are covered with these asphalt roofing materials.

McHenry-Millhouse Asphalt Prepared Roofing in Rolls is unquestionably the most economical and durable roofing material manufactured. It saves 50 per cent. in actual money. It is speedily applied—durable—almost everlasting—spark and fire-brand proof. Insurance companies make the same rates on it as on metal or slate. It is always pliable, never breaks, cracks nor shrinks. This roll roofing is practical for flat or steep surfaces. Made of the best waterproofing materials, it defies wind and weather and insures dry, comfortable buildings under all conditions. The best roofing in the world for the price.

We would be pleased to have you call and look at this new roofing and let us give you prices that will please you.

Good Bedding for Health and Comfort

The bed is the most important piece of furniture in a bedroom. It only a limited amount may be spent in furnishings, it is wise to economize elsewhere, so that a good mattress and springs may be purchased.

The mattress should first be protected by an unbleached muslin slip which can be washed occasionally. Next comes a light-weight quilted pad, also washable for further protection and smoothness. This can be bought ready-made or made of muslin and cotton batting, or an old light-colored quilt or cotton blanket may be used.

The quality of the sheets and pillow cases depends on how much one is able to invest. Home-made sheets and pillowcases have the advantage of being fitted to a particular bed, and often the materials wear better, the ready-made ones of good quality are sometimes more economical to buy. Sheets should be from 24 to 36 inches wider and longer than the mattress, so that the ends and sides can be generally tucked in 4 to 6 inches of the upper one turned down to keep the blankets clean. The hem at the top of a sheet should be at least 2-3 inches, and at the bottom from 3 to 4 inches. Machine hemstitching makes a pretty finish for pillowcases and the wider hem of a sheet. Seamless tubing can be bought for pillowcases.

Soft, fluffy blankets, containing a large proportion of good quality wool, are generally considered more comfortable and also most durable if given proper care. Many reliable manufacturers state the percentage of wool on a card attached to the blanket. Cotton blankets, when new, are in many cases as warm as wool, but they tend to become matted with wear and washing and consequently less warm. If a blanket is chosen with colored border, the border should be of the same quality wool as the rest of the blanket.

Comfortables of wool or cotton batting covered first and second with flannel and with an outer covering of pretty light-weight material are generally needed in the severe weather. Old-fashioned plaid quilts are often interesting, but are not so warm as the new ones. Having two spreads permits a bed to be kept always fresh.

How to Spin Sugar.

(By Alice E. Whitaker.)

When sugar is spun by machinery it is not so delicate as that made by hand. It tastes like cotton wool and thickens or flattens quickly. That spun in your own kitchen will be light or silky and not dense like the machine made, and it will keep several hours or a day if it is cool and dry. Do not undertake to spin sugar on any but a clear dry day for this sort of atmosphere is needed for success. Before beginning the work see that the air in the kitchen is dry; the teakettle should be set away and nothing be left cooking on the top of the range.

First lay two bars or rods of wood from the kitchen table to the backs of the chairs. The bars should be a little over two feet long, so as to rest on the chair and table and leave a two-foot space, and they should be the same distance apart. If nothing better is at hand, use two broom handles, washed clean and well dried. Sugar can be spun with two forks held in one hand and spread apart like a fan, so that there will be eight holes in a circle. Cotton confettions and coteaters have a sugar spinner, which is a bunch of wires of varying lengths, fastened into a handle, and a large glass bowl under the bars. Put two cups of granulated sugar and one-half cup of water into a saucepan, and stir until the sugar is dissolved; take out the sugar and let it stand for five minutes; wash down the sides of the pan with two fingers wet in cold water. It will not burn you, for the work is done quickly. This is essential to prevent the sugar from becoming too much of a venture to use the fingers, take a small brush and dip lightly into cold water, just enough to wet it, but not all in with cold water. Run a small brush, like a pastry brush used for buttering pans. Now add a pinch of cream tartar and continue the cooking until the syrup reaches the crack stage, which will be indicated as 310 degrees by the sugar thermometer. It is rather difficult to judge this stage without a thermometer, if one has little experience in sugar boiling, for the syrup will go from one condition to another rapidly, and for spinning it must be taken off just before the caramel stage is reached. When you find that it is crisp and cracks when chewed, and does not stick to the teeth, then set the saucepan at once into a pan of cold water for a minute to cool the cooking. Lift out and put the threads of the fork or the wires of the spinner into the syrup and wave back and forth over the heat, when long silky threads should fall like a cobweb over them. Work as rapidly as possible, in order to use the syrup while hot, and the threads will spin better if done quickly.

When enough is formed to use for a nest or a wreath, lift it from the bars and coil round as large as needed. If the syrup becomes too cold, it can be reheated, but it is better to avoid this as much as possible. Spun sugar is used for nests for fruit, glass, or to cover them like a mist, with loss and to wreaths delicate cold desserts.

Proved Recipes.

CRAB APPLE PICKLES.

1 quart of vinegar
1-2 pound of sugar
1 ounce of cloves
1-2 spoonful of allspice
4 bell peppers

Let them come to a boil, then put in crab apples enough to just be covered by the vinegar, then let them simmer till they begin to crack open. Leave the stems on.

HERMITS.

1-1/2 cups sugar
1-2 cup butter (soan)
3 cups flour
1-2 cup sour milk
1-2 cups chopped raisins
1-4 teaspoon salt
1-2 teaspoon each cloves, cinnamon, allspice
1 teaspoon soda

Let them come to a boil, then put in crab apples enough to just be covered by the vinegar, then let them simmer till they begin to crack open. Leave the stems on.

FINANCIAL STATUS

OF STATE OF MAINE

Statement of Governor Percival P. Baxter, as of August 31st, 1921

A few days after Governor Baxter took the oath of office he called together the heads of all State departments and State institutions and told them that he expected them to live within whatever appropriations the Legislature gave them for their work. The Governor emphasized the fact that the Legislature was in session at the time, and that the Legislature directly represented the people. He also told the heads of these departments and institutions that the Legislature imposed the taxes and the departments and institutions were responsible for how they were spent. The Governor said that he would not be responsible for overruns if departments and institutions exceeded their appropriations. The Governor wanted the fact made clear to everybody that the practice of asking the Governor and Council to provide the extra sums of money to meet deficits should be discontinued, and that he felt that the Council should not take unto itself the power of an appropriating body.

The departmental and institutional heads assured the Governor they would conform to his plans, and the result in most cases has been a tendency for departments and institutions to use up the last dollar of their appropriations given them by the Legislature, but Governor Baxter believes that strict economy should be exercised in state affairs, just as in private affairs. He is of the opinion that if it appears that a balance is to be left in an appropriation, the expenditures of that department should be carefully watched so that that balance may be saved and used for some other proper purpose. Governor Baxter does not want his administration to have a deficiency bill which the next Legislature would have to pay. In other words, when the Legislature decrees that a fixed amount of money is to be appropriated from the State Treasury for a given purpose, the matter should end there. That is all that should be spent for that purpose unless a real emergency arises after the Legislature adjourns.

Governor Baxter informed the heads of the State departments and institutions that he planned to take the public into his confidence and give them an account of his stewardship for the first six months' period of his administration. The following figures show what has been accomplished. A. D. 1921, the Auditor prepared at the request of the Governor shows that 363 separate appropriations were made by the Legislature for the first six months of the year 1921. The total appropriations made by the 1921 Legislature amounted to \$3,507,512.17. The total amount of overruns during the first six months amounted to \$41,639.37. In this overruns item is included \$203.49 for Pensions to retired employees as provided by law and for which no appropriation was made by the Legislature; \$722.17 for the special emergency railroad rate investigation; and \$1321.36 for completion of the Maine Mercantile which began in 1920 and which had been only partially completed. After deducting these items there is left an actual overruns of \$39,423.35 for which the departments and institutions of this administration are responsible. To meet this overruns money will be taken from the State Contingent Fund, which is made up of lapses that accumulate from such appropriations as have not been fully expended.

The Departments and Institutions that exceeded the appropriation which the Legislature made for them are as follows:

ADJUTANT GENERAL'S DEPT.	
Office expenses	\$32.10
ATTORNEY GENERAL'S OFFICE.	
Salaries & Clerk Hire	154.73
General Office Expenses	561.18
Inheritance Taxes—Salary and Expenses	13.37
BOARD OF PRISON COMMISSIONERS	
State Probation Officer	\$55.22
SLAVER MEMORIAL—(To complete work begun in 1920 and left unfinished.)	1,321.86
COMMISSIONER OF AGRICULTURE Salary and Clerk Hire	104.11
EXECUTIVE DEPARTMENT	
Education of the Blind	51.15
Employee Pensions (No appropriation by Legislature)	203.49
Railroad Investigation (Special—emergency)	722.17
HOSPITAL TRUSTEES	
Expenses	619.27
LIVE STOCK SANITARY COMMISSION	
Cleaned Animals	18,392.45
NORTHERN MAINE SANATORIUM.	
Proseque Isle	
Maintenance	5,844.56
PUBLIC UTILITIES COMMISSION	
Steamboat Inspectors	730.39
SEA AND SHORE FISHERIES	
Office Expenses of Wardens	456.08
Pay and Expenses of Wardens	\$87.37
STATE REFORMATORY FOR MEN.	
South Windham	
Maintenance	735.53
STATE BOARD OF CHARITIES AND CORRECTIONS	
Board and Care of Neglected Children	9,353.47
SUPREME JUDICIAL AND SUPERIOR COURTS.	
Expenses of Justices	99.37
TUBERCULOSIS TRUSTEES	
Expenses	251.25
TREASURER OF STATE	
Office Expenses	\$61.66
Total	\$41,639.37

These figures show the people of Maine how their financial affairs have been conducted during the first six months of 1921. It is a matter of importance for the people to study these figures so they will understand the State's financial condition. The total amount of overruns of \$41,639.37 herein shown are more than offset by savings that have been made in the appropriations of other departments and institutions that have not been expended in full. The total appropriations made by the Legislature amounted to \$3,507,512.17. Of this appropriation \$3,086,118.36 has not been spent. After deducting the overruns of \$41,639.37 from the unspent appropriation it appears that a net saving of \$474,530.99 for the first six months of 1921 has been made by this administration. There are always some bills that come in late and have to be taken care of, but in so far as there is any record of outstanding obligations all bills have been included in the within statement. The present administration, however, has been called upon to take the sum of \$144,479.40 from the Contingent Fund to pay bills incurred previously to January 1, 1921.

From this statement it appears that

EXCELLENT BUTTER SOOTHY PIE.

This is a recipe that always turns out well. It makes two pies: Two and a half cups brown sugar, three tablespoonfuls butter; mix and cook together until waxy. Then put in two tablespoonfuls flour, rolls of two eggs stirred in with a little water; add one cup of milk and one cup of water. Cook until thick. Have the crust ready. Best whites of two eggs to put over the top of pie. When filling is set in oven to brown.

The State's financial condition is sound, that all departments and institutions have been properly cared for, that \$474,530.99 have been saved from the appropriations, notwithstanding the fact that a reduction of 40% has been made in the State tax, without including the Soldiers' Bonus charges. A reduction of 35% of the tax has been made if the Soldiers' Bonus is charged against this present administration. The actual saving in the State tax is 49%, however, for a Soldiers' Bonus is an unusual charge and can not be considered as one of the regular and usual items which an administration is expected to meet from its ordinary income.

THE GREATEST BRIDGE TO DIXIE

THIS masterpiece of engineering, which spans the Ohio river between Metropolis, Illinois, and Paducah, Kentucky, is a link in a low-grade rail line from Puget sound to Florida. It is the largest bridge connecting the states bordering on the side of the river of the noted bridges of the world.

You can gain some idea of the size of this masterpiece of engineering, when you understand that 38,678,526 pounds of steel, 98,382 cubic yards of concrete, 5,707,000 feet, board measure, of lumber, 2,068,000 pounds of corrugated bars and 148,685 barrels of cement were used in its construction. The approach to the south end contains 856,000 cubic yards of earth.

It contains the longest simple span in existence—720 feet. The bridge proper is one mile and 500 feet long. It is supported by seven piers, the largest of which is 60 by 110 feet at the bottom and 185 feet high—larger than the average skyscraper. The total height of the bridge from the bottom of the pier to the top of the steel is 312 feet.

Some of the steel beams were so long that three forty-foot flat cars were necessary to successfully transport them from the place of manufacture to the point of duty. The bridge cost \$3,100,000—before the days of the high cost of living.

NOTICE.

In the District Court of the United States for the District of Maine, in Bankruptcy.

HERBERT M. BROWN, In Bankruptcy.

To the creditors of Herbert M. Brown of Stoneham, in the County of Oxford and District of Maine:

Notice is hereby given that on the 17th day of September, A. D. 1921, the said Herbert M. Brown was duly adjudicated bankrupt, and that the first meeting of his creditors will be held at the office of the Referee, No. 8 Market Square, South Paris, Maine, on the 26th day of October, A. D. 1921, at 10 o'clock in the forenoon, at which time the said creditors may attend, prove their claims, appoint a trustee, examine the bankrupt, and transact such other business as may properly come before said meeting.

South Paris, September 15, 1921.

WALTER L. GRAY, Referee in Bankruptcy.

An Improved

CHEVROLET

at a New Low Price

\$525 f.o.b. Flint.

Chevrolet "Four-Ninety," always a good car, is a better automobile than ever before. Improvements and refinements make it a real, quality automobile, at a new and exceptionally low price.

Here are the most important changes and refinements incorporated:

A new rear axle with a spiral bevel ring gear and pinion.
A hand-controlled emergency brake lever.

Improved springs.
Tapered roller bearings in front wheels.
Positive transmission alignment.

This new Chevrolet (for that is what the "Four Ninety" really is today) is a better designed car, better built and better finished. It stands out head and shoulders as a superior quality automobile, at an unusually low price. See this car today.

Reduced Prices on I H C Farm Machines

REDUCED prices recently announced by the International Harvester Company of America on its entire line of farm machinery, places us in a position where we can offer corresponding reductions on I H C farm-operating equipment.

We believe our customers will see the wisdom of placing orders now at the reduced prices for such machines as they will need in the near future. The reduced prices, coming at this particular time, enable you to secure planters, cultivators, haying and harvesting machinery at prices that we could not quote earlier in the year.

We know that it is a serious problem for the farmer as to whether he should buy new and modern machinery, either of the same or greater capacity than that which he is now using, or whether he should make another attempt to put in as good repair as he possibly can his old machinery.

To those in doubt, we offer the following suggestion: List all the repairs which you need for old machines, keeping the list for each machine separate, then bring the lists to us. We will give you an estimate of the cost of these repairs, and you can then determine the best course to pursue.

Look at this subject from different angles—1st. Will the repairs which you may buy now actually put your machines in good order, and will these repaired machines perform their work in a satisfactory manner?

2nd. Will the cost of repairs which may add only a year's additional life to an old machine be justified? If you will need a new machine next season, perhaps the cost of the repairs now will be out of proportion to the service or life which they will add to the machine.

And finally, if you contemplate the purchase of a new farm-operating equipment, we want to impress two important thoughts upon your mind: The quality, efficiency and capacity of the International Harvester lines, and the value to you of I H C Repair Service, which is prompt, dependable and continuous.
