This map shows the extent of surficial deposits in the geologically significant area of the U.S. Geological Survey. For example, surficial deposits are shown that may be used for water resources, mining, and other activities. The map is intended for use by engineers, planners, and others who need information about the surficial deposits in the area. The map includes a legend that describes the various types of deposits shown on the map, as well as a scale bar and a north arrow. The map is based on data collected by the U.S. Geological Survey and other agencies. The map is intended for use in the public domain and can be downloaded from the U.S. Geological Survey's website.
