Traffic Volume Counts by County, Town, and Route

FOREWORD

The Department of Transportation, Traffic Engineering Division, and Traffic Monitoring Section is responsible for the collection of all types of traffic data and maintenance of a statewide traffic volume database. The reduction and reporting of traffic volumes and vehicle classification data are accomplished through two types of count programs. They are as follows:

CONTINUOUS COUNT PROGRAM

Traffic volumes are monitored on a continuous year round basis at forty-three permanent recorder sites located on major highways throughout the State. These hourly counts are collected to produce an average weekday figure, a weekly average day, a monthly average day, and a monthly average weekday. This information is compiled to develop an Annual Average Daily Traffic (AADT) figure for each location. The AADT is computed from the average of the weekly average day totals for the year.

The increasing demand to determine the types of vehicles (e.g. passenger cars, single-unit trucks, and semi's) traveling Maine's highways has prompted the development of a Continuous Classification Program. Currently, the department has eleven locations along routed highways that collect data based on thirteen categories as defined by the Federal Highway Administration. An AADT is computed based on the total volume as well as summary data for individual vehicle types. Future plans include the installation of additional sites statewide over the next several years.

24 HOUR TRAFFIC DATA COLLECTION PROGRAM

Between April 1st and November 15th of each year, 24 hour traffic counts (i.e., coverage counts) are gathered to monitor traffic flow and changes in traffic patterns. These counts are generally taken at intersections with major routes and/or other significant roads, Compact Urban Lines (CUL), or Town Lines (TL), or in coordination with ongoing projects or special traffic studies for the Department.

Additionally, 24-hour vehicle classification counts are performed in conjunction with the coverage counts to provide a comprehensive view of traffic along the routed highways.

The State is divided into three count zones:

ZONE I : Southwestern Maine to western Penobscot Bay region. This zone includes all of York, Cumberland, Sagadahoc, Lincoln, Knox, and Waldo counties, Oxford county from Albany Twp/Waterboro West & Oxford, Otisfield, as well as Poland, and Mechanic Falls in Androscoggin county.

ZONE II : Western/Central Maine and eastern Penobscot Bay region. This zone includes all of Androscoggin except Poland, and Mechanic Falls, Franklin, Kennebec counties, the remainder of Oxford county, Somerset county from Bingham south plus between Flagstaff Lake area and Kennebec River, southern Penobscot county, and western Hancock county.

ZONE III : Northern and eastern Maine. This zone includes all of Aroostook, Piscataquis, Washington counties, northern and southeastern Hancock county, Penobscot county from Lagrange north, and the remainder of Somerset county.

These zones are counted on a five year cycle: Zones I and II are counted twice and Zone III once during each five year period. The coverage count program also consists of the “Special Counts” taken each year to satisfy Departmental needs, local requests, and Federal requirements. These include the annual collection of data for the State’s four urbanized areas (BACTS, KACTS, ATRC, and PACTS), Interstate System counts, and data collected from the various traffic studies conducted throughout the year. The 2006 Program included 4361 counts accomplished.

Once the AADT’s have been computed for all of the permanent recorder locations, weekly factors for each station are computed by dividing the AADT by each average weekly figure. Those stations which exhibit similar traffic patterns are assembled and placed into one of three groups:

URBAN : Roadways which carry commuter traffic and exhibit little seasonal change in traffic volumes.

ARTERIAL : Roadways which carry commuter traffic but exhibit moderate seasonal changes in traffic volumes.

RECREATIONAL : Roadways which are heavily influenced by seasonal traffic.

Within each of the three groups, a factor for each week is computed by averaging the weekly factors from each station within the group.

The 2006 Weekly Group Mean Factors were developed by averaging the Weekly Group Mean Factor for 2003, 2004 and 2005. The following pages show the graph of the 2006 Weekly Group Mean Factors, a list of these factors, and the 2006 Weekly Group Mean Factor as a percent of the AADT.

The 24-hour raw data may now be grouped and assigned a factor to produce an AADT. Growth factors for expanding traffic in uncounted zones are developed utilizing data from the permanent recorders and comparing it to the data from the previous year.

The updated AADT's are entered into the Maine Department of Transportation's database to be used by various Departmental employees.
