

Figure 8: Fossil shells in silt, clay, and sand of the Presumpscott Formation. Sediment deposited in low-energy glaciomarine environment in arctic, ice-proximal conditions. Shells at this site (Palermo 7.5-minute quadrangle, located just northeast of the village of China), were radiocarbon dated to $11,380 \pm 230$ C-14 yrs ago (corrected with -600-yr reservoir correction factor).
